

THERMOCOUPLE TEMPERATURE TRANSMITTER THT201

The Tekon Electronics In Head Temperature Transmitters are specifically designed to meet the most rigorous requirements of operation in the industrial process environments. Due to their reduced dimensions they can be installed in the the DIN Form B sensor connection head in place of traditional terminal blocks.

The operating parameters like the sensor type, connection method, measuring range, output signal range or fault value can be configured using the THT201 user friendly free software Tekon Configurator.

DIGITAL MEASUREMENT ACCURACY

THERMOCOUPLES (TC)		
SENSOR	RANGE °C	DIGITAL ACCURACY °C
E	-200 to 1000	1
J	-210 to 1200	1
K	-230 to 1370	1
N	-200 to 1300	1

S	-50 to 1760	2
T	-200 to 400	1

The digital accuracy is the accuracy after the analog/digital conversion including linearization and calculation of the measured value. An additional error is generated in the output current 4 to 20mA as a result of the digital/analog conversion of 0.025% of the set span (digital-analog error). The total error under reference conditions at the analog output is the sum from the digital error and the digital-analog error (poss. with the addition of cold junction errors in the case of thermocouple measurements).
